

WHY CHOOSE EUROBEX?

Eurobex Manufacturing Ltd. has been producing electrical and electronic enclosures since 1975.

Our commitment to complete customer satisfaction is reflected in the superior quality of our products.

Eurobex manufactures a full line of NEMA rated enclosures and cabinets for industrial and commercial applications.

Eurobex also produces consoles, PC cabinets, electrical distribution equipment, modular cabinets and accessories.

Our products are engineered with distinct product advantages, some of which are unparalleled in the industry.

The following reasons why you should choose our products demonstrate how **Eurobex is redefining enclosures.**

1. Poured-in-place gaskets

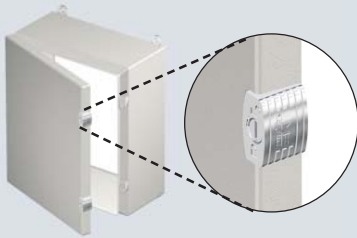

Many Eurobex products, including the new Mtrx modular cabinets, feature a high-quality seamless poured-in place gasket.

Contrary to neoprene gaskets used on most competing boxes, these gaskets preserve their integrity and do not suffer from compression.

This process extends the life of the enclosure and further assures the effectiveness of the seal.

Poured gaskets allow the effective use of quarter-turn locking technology. Indeed, the use of quarter turn locks with neoprene gaskets is inadequate because of compression problems.

2. Flange-mounted 1/4 turn locks

Eurobex ESCH enclosures feature easy-access 1/4 turn flange-mounted locking mechanisms which are located outside the gasket-protected area.

This eliminates water seepage problems through the lock and **provides a full workable space on the door.**

Standard JIC enclosures require the lengthy manual tightening of series of clamps to close the cover. In contrast, Eurobex ESCH enclosures are closed within seconds simply by operating a minimum number of 1/4 turn locks.

Key locks, padlock provisions and inserts are available.

3. Automated seamless welding

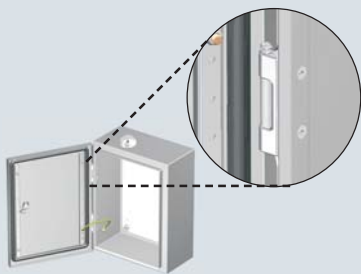

Eurobex benefits from an automated manufacturing process which allows seamless welding of nearly all enclosures, including some NEMA 1 & 3 products!

This makes the construction of our 5100 ES (NEMA 1) and our 5300 ES (NEMA 3) enclosures similar to that of a NEMA 4 box.

Seamless welding provides **above-par durability, rigidity & security**; all at a very competitive price.

Why settle for spot welding when you can benefit from all the advantages of continuously welded Eurobex enclosures?

4. Heavy duty die cast hinges

Eurobex industrial enclosures and modular cabinets feature heavy-duty die cast hinges.

These hinges are not spot welded, they are bolted on. This minimizes the risk of rust formation and facilitates their removal. They are also concealed to improve the appearance of the cabinets.

The hinge pin which binds the hinge to the door can be pulled out to remove the door. This hinge pin is secured by a ball bearing mechanism which prevents it from falling out accidentally. Therefore, even the doors of large freestanding cabinets can be easily removed.

WHY CHOOSE EUROBEX?

5. More modular, industrial and commercial products

Eurobex manufactures complete lines of modular, industrial and commercial enclosures. Eurobex offers more standard sizes to meet your specific requirements.

Industrial enclosures are available in beige (metric dimensions) and grey (standard dimensions). **Stop running around; Eurobex is a single source for all your enclosure requirements.**

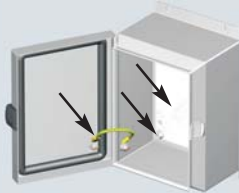

6. Galvanized Mtrx modular cabinet frame

Mtrx modular cabinet frames are roller-formed and are made of powder-coated electro-galvanized steel. This unique advantage offers exceptional corrosion resistance.

The symmetric frame is reinforced by an exclusive stiffening rib, present all along the inner edges of the cabinet. The result is a rigid, practical and aesthetic frame.

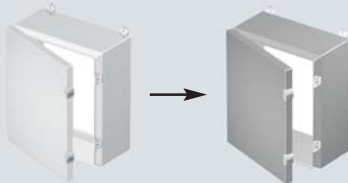

7. Inner panel and anti-vibration hardware included

Most Eurobex wall mounted enclosures (ES and ESCH series) come complete with an inner panel. This eliminates the need to purchase the panel separately.

Furthermore, most **Eurobex products are shipped with quality anti-vibration hardware.** This hardware is ideal for mobile OEM applications and comes at no extra cost to the customer.

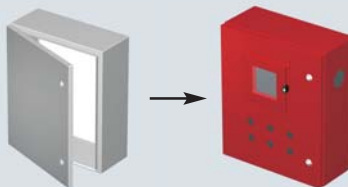

8. Save on powder coated stainless steel

Eurobex offers a full line of powder coated stainless steel products. Before contaminants are exposed to the stainless steel, they are thwarted by a durable layer of powder coating, which

maximizes the life of the stainless steel component. **Best of all, painted stainless steel costs less than brushed stainless steel!* That's more protection for less money!**

9. Customisation specialists

Our automated manufacturing process allows us to produce custom enclosures quickly and effectively. Components from the new Mtrx modular cabinet system can also be customized.

Eurobex can produce enclosures with special sizes or colors. We can punch holes or install studs and standoffs and a variety of other accessories such as windows, DIN rails and more.

10. Manufactured in North America

Most Eurobex products are produced in our fully automated North American manufacturing facilities.

This automation is the result of 25 years of in-house research and development.

These factors reduce lead time and allow us to remain flexible and competitive.

To optimize our level of service in the United States, a new distribution center was opened in Pittsburgh, PA, in January 2004.
